

Business Accounting & Billing Management System

Core Goals of the System

The system aims to help businesses:

- Manage customers and contacts
 - Create and manage quotations
 - Generate invoices and receipts
 - Track sales workflow
 - Maintain GST-ready business documents
 - Share documents digitally
 - Track approvals and statuses
 - Manage role-based access
 - Support multiple businesses under one account
 - Maintain organized business operations
-

1. User Account Registration & Business Onboarding

Overview

The platform provides a guided onboarding workflow where new users can:

- Create an account
- Verify business details
- Configure company settings
- Select business type
- Prepare the workspace before accessing the accounting system

This onboarding acts as the entry point to the Business Accounting & Billing Management System.

Step 1 — User Signup

Signup Methods

Users can create an account using:

- Google Authentication
- Email & Password Registration

Signup Fields

The signup form includes:

- Country Selection
- Full Name
- Email Address
- Phone Number
- Password Creation
- Terms & Conditions Acceptance

Features

- Country-based phone validation
- Secure password setup
- reCAPTCHA protection
- Privacy policy & terms acceptance
- Login redirection for existing users

Workflow

1. User opens signup page
 2. User enters personal details
 3. User verifies mobile/email
 4. Account is created
 5. User is redirected to business setup
-

Step 2 — Business Setup

Business Information Collection

After account creation, the user configures business details.

Fields

- Business Name
- Brand / Display Name
- Team Size
- Website URL
- Business Phone Number
- Country
- Currency
- VAT Registration Status
- TRN (Tax Registration Number)

Features

- Multi-country support
- Currency configuration

- VAT-enabled business setup
- Team-based business configuration
- Business branding support

Workflow

1. User enters business information
 2. VAT configuration is selected
 3. Currency & region are configured
 4. Business profile is created
 5. System proceeds to onboarding preferences
-

Step 3 — Business Type & Usage Configuration

Purpose Selection

Users select how they plan to use the system.

Example Use Cases

- Accounting
- Billing & Invoicing
- Inventory Management
- Client Management
- Business Operations

Business Category Selection

Available Categories

- Manufacturer
- Trading
- Retail
- Online Business
- Professional Services
- Contractor
- Software
- Other Businesses

Features

- Personalized onboarding
- Industry-specific workflow preparation
- Module recommendations
- Business-type customization

Workflow

1. User selects platform usage purpose

2. User selects business category
3. System configures onboarding preferences
4. Dashboard and modules are prepared
5. User enters the main application

2. Role-Based Access System

Overview

The software includes a role and permission management system where administrators can create custom roles and define what actions each role can perform.

Features

- Create custom roles
- Assign permissions
- Restrict module access
- User invitation system
- Multi-user business access

User Invitation Workflow

1. Admin creates a user
 2. Enter:
 - Name
 - Valid Email
 - Business Role
 3. Invitation email is sent
 4. User sets password
 5. User gains system access
-

3. Contacts Management

Overview

Contacts are used to store the people associated with clients, vendors, leads, or organizations.

Concept

- A contact is a person
- A client/vendor is a company
- One company can have multiple contacts
- One contact can be linked to multiple companies

Features

- Store contact details separately

- Link contacts with organizations
 - Mark primary contact
 - Use contacts inside documents
 - Organize communication records
-

Sales & Invoice

4. Client & Prospect Management

Features

Basic Information

- Client image upload
- Business/Client name
- Country
- City/Town
- Industry selection

Tax Information

- GSTIN
- PAN Number
- Tax Treatment
- Currency settings

Client Types

- Individual
- Company

Additional Information

- Address
 - Shipping details
 - Linked contacts
 - Attachments
 - Account details
-

5. Quotation Module

Overview

The quotation module allows businesses to create professional quotations for customers before confirming sales.

Quotation Creation Workflow

Step 1 — Quotation Details

- Quotation Number
 - Quotation Date
 - Valid Till Date
 - Subtitle
 - Custom Fields
 - Business Logo
-

Step 2 — Business & Client Details

Business Information

- Business Name
- Address
- GSTIN
- PAN

Client Information

- Client Name
 - Address
 - Contact Person
 - Linked Contacts
-

Step 3 — Shipping & Transport Details

Shipping Details

- Shipped From
- Warehouse Selection
- Shipping Address
- Postal Code
- State

Transport Details

- Transporter Details
 - Distance
 - Vehicle Type
 - Vehicle Number
 - Transport Document Number
 - Transaction Type
-

Step 4 — Item Configuration

Each quotation item includes:

- Item Name

- HSN/SAC
- GST Rate
- Quantity
- Unit
- Rate
- Amount
- CGST
- SGST
- Total

Additional Features:

- Add Description
 - Add Item Image
 - Add Unit
 - Add Groups
 - Add Discounts
 - Add Additional Charges
-

Step 5 — Totals & Summary

- Total Quantity
 - GST Summary
 - Total Amount
 - Amount in Words
-

Step 6 — Additional Information

- Signature
 - Terms & Conditions
 - Notes
 - Attachments
 - Additional Information
 - Contact Details
-

6. Advanced Quotation Settings

Features

- HSN Column View
 - Split
 - Merge
 - Default
- Display Unit Options
 - Merge with Quantity
 - Merge with Name
- Show Tax Summary
- Show Country of Supply

- Show HSN Summary
 - Show Serial Numbers
 - Show Batch Details
 - Show Full Width Description
 - Show SKU
-

7. Quotation Customization

Design & Share Features

- Template Selection
 - Color Customization
 - Font Customization
 - Letterhead
 - Footer
 - Watermark
 - PDF Configuration
 - Page Size
 - Margin Settings
 - Script Changes
 - Bank Details
 - UPI Details
 - Batch Summary
-

8. Quotation Actions

Available Actions

- Download PDF
 - Send via Email
 - Send via WhatsApp
 - Send Reminder via Email
 - Send Reminder via WhatsApp
 - Duplicate Quotation
 - Cancel Quotation
 - Delete Quotation
-

9. Quotation Conversion Workflow

A quotation can be converted into:

- Invoice
- Proforma Invoice
- Sales Order

- Purchase Order
 - Delivery Challan
-

10. Quotation Status Tracking

Status Types

- Draft
- Pending
- Approved
- Rejected
- Cancelled

Workflow

When a quotation is sent to the client:

1. Client opens shared link
 2. Client reviews quotation
 3. Client approves or rejects
 4. Status updates automatically in dashboard
 5. Notification is sent to the business
-

11. Proforma Invoice Module

Definition

A Proforma Invoice is a temporary or preliminary invoice sent before the final sale is completed.

It provides estimated pricing, taxes, and payment details for customer approval or advance payment purposes.

Unlike a final invoice, it does not create accounting or GST entries.

Features

Invoice Details

Same structure and fields as quotation.

Additional Features

- Bank Details
- UPI Details
- Customization & Sharing

12. Invoice Module

Definition

An invoice is a formal payment request document issued to a customer for delivered goods or services.

Features

Invoice Details

Same structure and fields as quotation.

Additional Features

- GST Calculations
 - PDF Generation
 - Sharing Options
 - Payment Tracking
-

13. Payment Receipt Module

Features

Receipt Information

- Payment Receipt Number
 - Client Selection
 - Receipt Date
 - Currency
 - Number Format
-

Payment Records

- Payment Method
- Deposited To
- Payment Ledger
- Amount Received
- TDS Percentage
- TDS Withheld
- Transaction Charges
- Reference ID
- Additional Notes

Settlement Features

- Settle Unpaid Invoices
 - Client Advance Payments
-

14. Sales Order Module

Definition

A Sales Order is a document created after the customer confirms the purchase.

Features

- Same structure as quotation
 - Order tracking
 - Sales workflow management
 - Design & share support
-

15. Delivery Challan Module

Definition

A Delivery Challan is issued when goods are dispatched to the customer.

Features

- Same structure as quotation
 - Shipping information
 - Transport information
 - Delivery tracking
 - Design & share support
-

16. Credit Note Module

Definition

A Credit Note is used to reduce the amount payable by a customer.

It is commonly used for:

- Product returns
 - Discounts
 - Invoice corrections
 - Refund adjustments
-

Features

- Same structure as quotation
 - Invoice adjustment support
 - GST adjustment handling
 - Design & share support
-

17. Business Document Workflow

Workflow Connection Between Documents

1. Quotation

Initial proposal sent to customer.

↓

2. Sales Order

Created after customer approval.

↓

3. Delivery Challan

Generated when goods are dispatched.

↓

4. Invoice

Generated for payment collection.

↓

5. Payment Receipt

Generated after receiving payment.

↓

6. Credit Note (Optional)

Used for returns or adjustments.

18. Interconnection of Business Documents

Workflow Summary

Quotations

Lead to sales orders or proforma invoices.

Sales Orders

Trigger dispatch and delivery process.

Delivery Challans

Confirm product delivery.

Invoices

Request customer payment.

Payment Receipts

Confirm payment settlement.

Credit Notes

Adjust invoice amounts when needed.

19. Buyer-Seller Integrated Workflow

Overview

The platform supports a complete buyer-seller collaboration workflow where businesses can digitally exchange quotations, purchase orders, invoices, payment receipts, and payout receipts directly through the system.

The workflow is designed to provide real-time transaction tracking, approval management, vendor relationship automation, and payment settlement handling between both parties.

The system supports both:

- Fully digital workflows
 - Manual/offline transaction workflows
-

20. Advanced Quotation Approval Workflow

Features

- Create and send quotations through email
- Email includes quotation approval invitation link
- Client must login or register before accepting quotation
- Automatic vendor relationship creation after acceptance
- Real-time approval/rejection notifications
- Quotation conversion workflows

Workflow

Step 1 — Create Quotation

Seller creates a quotation with:

- Client details
- Items & pricing
- Taxes & GST
- Payment terms
- Attachments
- Terms & conditions

Step 2 — Send Quotation

Quotation can be sent through:

- Email
- WhatsApp
- Shared link
- PDF download

Step 3 — Client Authentication

When client opens the quotation link:

- If client is not logged in:
 - Login required
- If client does not have an account:
 - Registration required

Step 4 — Vendor Auto Linking

After successful registration/login:

- Seller automatically becomes a vendor/supplier in client account
- Vendor profile is created automatically

Step 5 — Approval Workflow

Client can:

- Accept quotation
- Reject quotation
- Add comments/notes

Step 6 — Notification System

Seller receives:

- Approval email
- Rejection email
- Activity notification

Step 7 — Conversion Workflow

Accepted quotations can be converted into:

- Invoice
 - Purchase Order
 - Sales Order
 - Proforma Invoice
 - Delivery Challan
-

21. Vendor Auto-Creation & Relationship Management

Features

- Automatic vendor creation
- Buyer-seller relationship linking
- Centralized transaction history
- Shared business records
- Vendor communication tracking

Workflow

When any quotation or business document is accepted:

1. Seller is added as vendor in client account
 2. Vendor profile becomes available in Purchase & Expenses module
 3. Future transactions can reuse vendor information
 4. Transaction history is stored centrally
-

22. Purchase Order Collaboration Workflow

Features

- Convert quotation into purchase order
- Send purchase order to seller
- Seller receives purchase order notification
- Purchase order approval workflow

- Purchase invoice generation support

Workflow

Client Side

1. Open accepted quotation
2. Convert to Purchase Order
3. Send Purchase Order to seller

Seller Side

1. Receive purchase order email
 2. Review purchase order
 3. Accept or reject order
 4. Generate invoice/bill
-

23. Invoice Acceptance & Billing Workflow

Features

- Generate invoices from quotations or sales orders
- Digital invoice sharing
- Invoice acceptance/rejection
- Invoice dashboard tracking
- Payment tracking
- Manual payment support

Workflow

Seller Side

1. Create invoice
2. Send invoice to client
3. Track invoice status

Client Side

1. Receive invoice
2. Accept/reject invoice
3. Record invoice as:
 - Expense
 - Expenditure
 - Purchase bill

Seller Dashboard

Accepted invoices appear in:

- Invoice dashboard

- Pending payment section
 - Payment tracking reports
-

24. Payment Approval & Settlement Workflow

Features

- Record payments
- Payment approval system
- Ledger selection
- Bank account selection
- Settlement tracking
- Payment receipt generation

Client Payment Workflow

Step 1 — Record Payment

Client records payment with:

- Payment method
- Bank account
- Ledger account
- Reference number
- Transaction notes

Step 2 — Payment Notification

Seller receives:

- Payment email notification
- Payment approval request

Step 3 — Seller Verification

Seller verifies:

- Payment details
- Bank transaction
- Ledger entries

Step 4 — Settlement

After approval:

- Invoice status changes to:
 - Paid
 - Settled
- Payment receipt generated automatically

Step 5 — Receipt Sharing

Seller can send:

- Payment receipt
- Settlement confirmation

Client can send:

- Payout receipt
 - Payment confirmation
-

25. Manual Transaction Workflow

Overview

The system supports manual/offline transaction workflows for businesses that exchange printed documents or operate outside the digital approval system.

Manual Workflow Features

- Manual quotation approval
- Manual invoice conversion
- Manual payment updates
- Manual settlement handling

Important Behavior

If quotation or invoice is:

- Printed
- Sent manually
- Shared outside platform

Then:

- Automatic transaction tracking does not occur
- Status updates must be handled manually

Manual Actions Required

Users must manually:

- Update quotation status
 - Convert quotation to invoice
 - Record payment
 - Mark invoice as paid
-

26. Expense Payment Exception Workflow

Overview

When clients pay invoices through the Expenses/Expenditure module, payment notifications are sent but automatic settlement does not occur.

Workflow

Client Side

1. Open invoice
2. Record as expenditure
3. Make payment

Seller Side

1. Receive payment email
2. Invoice status remains unpaid
3. Seller manually records payment

Manual Seller Actions Required

Seller must:

- Open invoice
 - Record payment manually
 - OR
 - Mark invoice as paid
-

27. Enhanced Sales Order Workflow

Features

- Create sales orders
- Send sales orders digitally
- Convert sales order to invoice
- Client purchase workflow
- Payment settlement workflow

Workflow Option 1 — Approval Based

1. Seller creates Sales Order
2. Client receives Sales Order
3. Client converts to purchase
4. Client makes payment
5. Client returns invoice bill
6. Seller approves bill
7. Transaction completed

Workflow Option 2 — Direct Invoice Conversion

Sales orders can also:

- Directly convert into invoices
 - Send invoice to client
 - No approval required
-

Purchase & Expenses

28. Purchase & Expenses Management Enhancements

Vendor Leads Section

Used for:

- Creating vendor leads
- Supplier prospect management
- Procurement opportunities

Vendors & Suppliers Section

Used for:

- Managing vendors
- Managing suppliers
- Vendor communication
- Vendor transaction records

Purchase & Expenses Section

Used for:

- Managing purchases
- Expense tracking
- Vendor payments
- Operational expenditures

Purchase Orders Section

Used for:

- Purchase order management
- Approval workflows
- Procurement tracking

Payout Receipts Section

Used for:

- Managing outgoing payment receipts
- Vendor payout tracking
- Settlement records

Debit Notes Section

Used for:

- Purchase returns
- Vendor adjustments
- Accounting corrections

Vendor Discovery Section

Used for:

- Finding vendors
 - Hiring suppliers
 - Supplier sourcing
-

29. Email Notification & Automation System

Automated Email Features

System automatically sends emails for:

- Quotation sharing
- Approval requests
- Rejections
- Purchase orders
- Invoice sharing
- Payment requests
- Payment approvals
- Payment receipts
- Payout receipts

Reminder System

Automated reminders for:

- Pending quotations
- Unpaid invoices
- Pending approvals
- Pending settlements

Activity Logs

All actions are recorded in:

- Activity history
 - Audit logs
 - Workflow tracking system
-

30. Complete Business Transaction Lifecycle

End-to-End Workflow

Stage 1 — Quotation Creation

Seller creates quotation and sends to client.

Stage 2 — Client Authentication

Client logs in or registers to access quotation.

Stage 3 — Quotation Approval

Client accepts or rejects quotation.

Stage 4 — Vendor Linking

Seller automatically added as vendor.

Stage 5 — Purchase Order Creation

Client converts quotation into purchase order.

Stage 6 — Invoice Generation

Seller generates invoice and sends to client.

Stage 7 — Payment Recording

Client records payment or expenditure.

Stage 8 — Payment Approval

Seller verifies and approves payment.

Stage 9 — Settlement

Invoice marked as:

- Paid
- Settled

Stage 10 — Receipt Generation

System generates:

- Payment receipt

- Payout receipt
- Settlement records

Accounting

31. Account Group Module

Definition

An Account Group is a classification used to organize similar ledger accounts within the accounting structure of a business. It helps categorize accounts into logical groups for easier management, reporting, and financial analysis.

Purpose of Account Groups

- Organize accounts systematically
- Simplify financial reporting
- Improve account management
- Enable accurate financial analysis
- Maintain a structured chart of accounts

Accounting Hierarchy

The accounting structure generally follows this hierarchy:

1. Account Types
 - Assets
 - Liabilities
 - Income
 - Expenses
 - Equity (Capital)
2. Categories
 - Current Assets
 - Non-current Assets
 - Current Liabilities
 - Direct Expenses
 - Indirect Expenses
3. Account Groups
 - Bank Accounts
 - Cash Accounts
 - Accounts Receivable
 - Accounts Payable
 - Office Expenses

Example

Under the Asset type:

- Current Assets
 - Cash
 - Bank Accounts
 - Accounts Receivable
- Non-current Assets
 - Property
 - Equipment

Features

- Create custom account groups
- Organize accounts by category
- Edit or delete account groups
- Link groups with ledger accounts
- Structured financial reporting

Workflow

1. Open the Account Group module
 2. Click “Create New Account Group”
 3. Enter account group name
 4. Select account type
 5. Choose category if applicable
 6. Save the account group
 7. Manage existing account groups from the list
-

32. Chart of Accounts (CoA) Module

Definition

The Chart of Accounts (CoA) is a structured list of all financial accounts used by a business to record accounting transactions. It forms the foundation of the accounting system and organizes all financial data systematically.

Purpose

- Organize financial transactions
- Maintain consistent bookkeeping
- Generate financial statements
- Simplify auditing and reporting
- Improve financial analysis

Structure of the Chart of Accounts

Each account contains:

- Account Number
- Account Name
- Account Type
- Account Group
- Description

Common Account Types

Assets

Resources owned by the business.

Examples:

- Cash
- Bank Accounts
- Inventory
- Accounts Receivable

Liabilities

Amounts owed by the business.

Examples:

- Loans
- Accounts Payable
- Taxes Payable

Equity (Capital)

Owner's interest in the business.

Examples:

- Capital Account
- Retained Earnings

Income

Revenue earned from business operations.

Examples:

- Sales Revenue
- Service Income

Expenses

Operational costs incurred by the business.

Examples:

- Rent Expense
- Salary Expense
- Utility Expense

Features

- Create and manage accounts
- Assign accounts to groups
- Configure account numbering
- Organize financial structure
- Generate financial reports

Workflow

1. Open Chart of Accounts
2. Click "Add New Account"
3. Enter account details
4. Select account type
5. Assign account group
6. Save account

7. Repeat for all required accounts
-

33. Voucher Books Module

Definition

Voucher Books are organized collections of vouchers used to record and manage business transactions systematically. Each voucher book stores vouchers of a specific transaction type.

Purpose

- Organize transactions
- Simplify bookkeeping
- Improve auditing
- Maintain transaction records
- Generate voucher-based reports

Types of Voucher Books

- Invoice Voucher Book
- Payment Voucher Book
- Receipt Voucher Book
- Journal Voucher Book
- Purchase Voucher Book

Features

- Create voucher books
- Record voucher entries
- Categorize transactions
- Manage transaction history
- Generate voucher reports

Workflow

Create Voucher Book

1. Navigate to Voucher Books
2. Click "Create New Voucher Book"
3. Enter voucher book name
4. Select voucher type
5. Save voucher book

Add Voucher Entry

1. Open voucher book
2. Click "New Entry"
3. Enter transaction details
4. Save voucher entry

34. Balance Sheet Module

Definition

A Balance Sheet is a financial statement that shows the financial position of a business at a specific point in time. It displays the company's assets, liabilities, and equity.

Components

Assets

Resources owned by the business.

Examples:

- Cash
- Inventory
- Property
- Equipment

Liabilities

Obligations owed to others.

Examples:

- Loans
- Accounts Payable
- Taxes Payable

Equity

Owner's residual interest in the business.

Examples:

- Capital
- Retained Earnings

Fundamental Accounting Equation

$\text{Assets} = \text{Liabilities} + \text{Equity}$

Calculation Steps

1. Calculate total assets
2. Calculate total liabilities
3. Calculate owner's equity
4. Verify accounting equation balances

Formula

$$\text{Total Assets} = \text{Total Liabilities} + \text{Total Equity}$$

Purpose

- Measure financial position
 - Assess liquidity and solvency
 - Support financial analysis
 - Prepare business reports
-

35. Trial Balance Module

Definition

A Trial Balance is a financial report that lists all ledger account balances at a specific date to verify that total debits equal total credits.

Purpose

- Verify accounting accuracy
- Detect bookkeeping errors
- Prepare financial statements
- Ensure ledger balancing

Calculation Process

1. Collect all ledger balances
2. Separate debit and credit balances
3. Calculate total debits
4. Calculate total credits
5. Compare totals

Formula

$$\text{Total Debits} = \text{Total Credits}$$

Features

- Ledger balance verification
 - Error identification
 - Financial statement preparation
 - Accounting validation
-

36. Profit and Loss (P&L) Module

Definition

The Profit and Loss Statement (P&L), also called the Income Statement, summarizes revenues, expenses, and profit or loss over a specific accounting period.

Purpose

- Measure business profitability
- Track income and expenses
- Analyze operational performance
- Support business decisions

Components

Revenue

Income earned from sales or services.

Cost of Goods Sold (COGS)

Direct costs associated with products or services sold.

Gross Profit

$$\text{Gross Profit} = \text{Revenue} - \text{COGS}$$

Operating Expenses

Expenses incurred in daily operations.

Operating Profit

$$\text{Operating Profit} = \text{Gross Profit} - \text{Operating Expenses}$$

Net Profit

$$\text{Net Profit} = \text{Operating Profit} + \text{Other Income} - \text{Other Expenses}$$

Features

- Revenue tracking
- Expense management
- Profitability analysis
- Financial performance reporting

37. Income Statement Module

Definition

An Income Statement is a financial report showing revenues, expenses, and net profit or loss during a specific period. It evaluates the operational performance of the business.

Purpose

- Analyze profitability
- Evaluate operational performance
- Support financial planning
- Generate financial reports

Key Components

- Revenue
- Cost of Goods Sold
- Gross Profit
- Operating Expenses
- Operating Profit
- Net Profit

Core Formula

Net Profit = Total Revenue - Total Expenses

38. All Ledger Master Report Module

Definition

The All Ledger Master Report is a comprehensive report that displays all ledger accounts, including opening balances, transactions, debits, credits, and closing balances.

Purpose

- Monitor ledger activities
- Analyze account balances
- Review transaction history
- Support auditing

Calculation Formula

Closing Balance = Opening Balance + Total Debits - Total Credits

Features

- Ledger transaction tracking
- Opening and closing balances
- Debit and credit summaries
- Financial activity analysis

39. Day Book Module

Definition

A Day Book is a chronological record of all daily financial transactions entered into the accounting system.

Purpose

- Record daily transactions
- Maintain transaction history
- Simplify ledger posting
- Improve bookkeeping accuracy

Types of Day Books

- Sales Day Book
- Purchase Day Book
- Cash Book
- Bank Book
- General Day Book

Features

- Daily transaction recording
- Chronological transaction management
- Voucher tracking
- Ledger posting support

Workflow

1. Record daily transactions
 2. Enter debit and credit details
 3. Verify entries
 4. Post to ledger accounts
-

40. Cash Flow Statement Module

Definition

A Cash Flow Statement is a financial report showing the movement of cash and cash equivalents within a business during a specific period.

Purpose

- Analyze cash inflows and outflows
- Measure liquidity
- Evaluate financial health
- Track operational cash management

Main Sections

Operating Activities

Cash generated from business operations.

Investing Activities

Cash used for purchasing or selling assets.

Financing Activities

Cash received from loans, investments, or equity financing.

Cash Flow Formulas

Operating Cash Flow

Operating Cash Flow = Net Income + Non-Cash Expenses + Changes in Working Capital

Investing Cash Flow

Cash Flow from Investing = Sale of Assets - Purchase of Assets

Financing Cash Flow

Cash Flow from Financing = Loan Proceeds + Share Issuance - Loan Repayments - Dividends Paid

Net Cash Flow

Net Cash Flow = Operating Activities + Investing Activities + Financing Activities

Features

- Cash inflow tracking
- Cash outflow tracking
- Liquidity analysis
- Financial planning support
- Cash position reporting

Sales CRM & Leads

41. Sales Pipeline Module

Definition

A Sales Pipeline is a structured system used to record, manage, track, and organize leads throughout the sales process. It visually represents the stages a lead goes through before becoming a customer.

The sales pipeline works similarly to a structured tracking sheet where businesses can monitor lead progress, sales activities, follow-ups, and deal status in one centralized system.

Purpose of the Sales Pipeline

- Track lead progress
 - Manage sales opportunities
 - Organize sales workflows
 - Improve conversion rates
 - Monitor sales performance
 - Identify bottlenecks in the sales process
-

Pipeline Management Features

Create & Manage Pipelines

Users can:

- Create new sales pipelines
- Edit pipeline details
- Delete pipelines
- Configure workflow stages

Pipeline Details

Each pipeline contains:

- Pipeline Name
 - Description
 - Pipeline Stages
-

Default Pipeline Stages

Typical stages include:

- Open
- Contacted
- Proposal Sent
- Deal Done
- Lost
- Not Serviceable

Users can also create custom stages based on business requirements.

Closure Probability (%)

Each stage can include an estimated closure probability percentage.

Example:

Stage	Closure Probability
Open	10%
Contacted	30%
Proposal Sent	60%
Deal Done	100%
Lost	0%

This helps estimate expected revenue and forecasting.

Lead Management

What is a Lead?

A Lead is a person or organization that has shown interest in a company’s product or service and has the potential to become a future customer.

Create New Lead

Required Information

- Contact Name
- Country
- Lead Subject
- Sales Pipeline
- Pipeline Stage

Optional Information

- City
- Phone Number
- Email Address
- Designation
- Prospect Organization
- Description

Contact Integration

- Existing contacts can be linked from the Contacts Module.
 - New contacts can also be created directly while adding a lead.
-

Lead Details Fields

Contact Information

- Contact Name
- Country
- City
- Phone
- Email
- Designation

Organization Information

- Prospect Organization
- Company Name

Lead Information

- Lead Subject
- Additional Description
- Sales Pipeline
- Pipeline Stage

Custom Fields

Businesses can create custom fields to match their workflow requirements.

Examples:

- Budget
 - Industry
 - Priority
 - Source
 - Expected Revenue
-

Features

- Lead tracking
- Pipeline management
- Custom stages
- Lead assignment
- Follow-up management
- Lead status tracking
- Lead conversion workflow
- Custom field support

42. Form Module

Definition

The Form Module is used to collect leads from customers through online forms. Businesses can create customized lead capture forms and share them through websites, landing pages, or direct links.

Form Creation Workflow

Step 1 — Select Sales Pipeline

Choose the sales pipeline where captured leads will be automatically added.

Step 2 — Select Form Fields

Default Fields

- Full Name
- Email Address
- Phone Number
- Organization Name
- Message

Custom Fields

Users can create additional custom fields based on requirements.

Examples:

- Budget
 - Service Requirement
 - Preferred Contact Time
 - Business Type
-

Step 3 — Configure Form

Branding & Design

- Business Logo
- Form Title
- Form Description
- Form Name

- Button Color
- Theme Selection

Response Configuration

- Submit Message
- Reply-To Email
- Email Notification Recipient
- Lead Assignment

Redirect Settings

Users can configure a redirect URL after successful form submission.

Example:

- Thank You Page
- Landing Page
- Website Homepage

Security

- CAPTCHA Verification
 - Spam Protection
-

Form Publishing Methods

1. Embed Form

Generate embed code to place the form inside a website.

Workflow

1. Click “Get Code”
 2. Copy generated HTML code
 3. Paste into website HTML
-

2. Open Form on Button Click

Users can load forms dynamically using a universal script.

Includes:

- Universal Script
- Button Code

Workflow

1. Copy universal script

2. Add script inside website header
 3. Add button code to desired button
-

3. Shareable Link

Generate a secure public form link for direct sharing.

Features

- Copy Link Button
 - Public Access
 - Secure Submission
-

Form Management

Form Listing Fields

- Form Name
 - Sales Pipeline
 - Status
 - Last Modified
 - Captured Leads
 - Created Date
 - Creator
-

Form Actions

Users can:

- View captured leads
 - Edit forms
 - Delete forms
 - Mark forms as inactive
-

43. All Leads Module

Definition

The All Leads Module provides a centralized view of all leads captured within the CRM system.

It allows businesses to manage, filter, track, and update lead information efficiently.

Lead Table Fields

The lead listing includes:

- Pipeline
 - Contact Name
 - Organization Name
 - Email
 - Phone
 - Contact Country
 - Customer Country
 - Customer City
 - Created At
 - Lead Source

Lead Filters

Users can filter leads by status:

- All Leads
 - New
 - Open
 - Deal Done
 - Lost
 - Not Serviceable
 - Deleted Leads
-

Lead Actions

Pipeline Management

- Change lead pipeline
- Update lead stages
- Assign leads to team members

Meeting Scheduling

Schedule Meeting Fields

- Lead Selection
- Meeting Title
- Start Time
- Duration
- Meeting Category
- Meeting Type
- Participants
- External Contacts
- Notes

Meeting Categories

- Demo
- Follow-Up
- Closing
- Discussion

Meeting Types

- Video Call
- Phone Call
- In-Person Meeting

Integration Support

- Google Meet
 - Zoom
 - Other meeting platforms
-

Lead Conversion Workflow

Leads can be converted into:

- Quotations
- Sales Opportunities
- Customers

Businesses can directly generate quotations and send them to clients.

44. All Meetings Module

Definition

The All Meetings Module stores and manages all scheduled meetings related to leads and sales activities.

Meeting Fields

- Title
 - Lead
 - Scheduled Date
 - Scheduled Time
 - Duration
 - Status
 - Cancelled At
 - Cancelled By
 - Created By
-

Features

- Meeting scheduling
 - Meeting cancellation
 - Meeting status tracking
 - Calendar management
 - Video meeting integrations
-

45. Leads Summary Module

Definition

The Leads Summary Module provides an overview of lead performance and sales pipeline statistics.

It helps businesses monitor lead conversion efficiency and sales performance.

Summary Metrics

Total Leads

Total number of leads within the selected period.

Open Leads

Leads currently in progress.

Closed Leads

Leads successfully converted into customers.

Lost Leads

Leads that did not convert.

Not Serviceable Leads

Leads that cannot be serviced.

Conversion Rate Formula

$$\text{Conversion Rate} = \left(\frac{\text{Closed Leads}}{\text{Total Leads}} \right) \times 100$$

Average Closure Time

Average number of days required to close leads.

First Response Time

Measures the response speed of sales representatives.

Metrics may include:

- Median Response Time
 - 75th Percentile
 - 90th Percentile
 - 95th Percentile
-

Dashboard Features

- Lead summary cards
 - Graphs and charts
 - Pipeline analytics
 - Performance insights
 - Filter support
-

46. Team Sales Report Module

Definition

The Team Sales Report provides detailed insights into the performance of sales team members. It helps analyze productivity, revenue generation, and lead conversion performance.

Report Metrics

Leads Assigned

Total leads assigned to each salesperson.

Leads Closed

Successfully converted leads.

Total Revenue

Revenue generated from closed deals.

Conversion Rate Formula

$$\text{Conversion Rate} = \left(\frac{\text{Leads Closed}}{\text{Leads Assigned}} \right) \times 100$$

Average Deal Size Formula

$$\text{Average Deal Size} = \frac{\text{Total Revenue}}{\text{Leads Closed}}$$

Additional Metrics

- Response Time
 - Follow-Up Count
 - Sales Activities
 - Team Productivity
-

Report Features

- Team performance comparison
- Revenue analysis
- Conversion tracking
- Graphs and charts

- Filter and export options
-

47. Client Performance Report Module

Definition

The Client Performance Report analyzes the performance and engagement level of clients within the sales process.

It helps businesses identify valuable clients and improve relationship management.

Report Metrics

Total Revenue

Total revenue generated from the client.

Leads Generated

Total leads associated with the client.

Open Leads

Leads still in progress.

Closed Leads

Successfully converted leads.

Lost Leads

Leads that failed to convert.

Not Serviceable Leads

Leads outside service scope.

Lead Conversion Formula

$$\text{Lead Conversion Rate} = \left(\frac{\text{Closed Leads}}{\text{Total Leads}} \right) \times 100$$

Average Deal Value Formula

$$\text{Average Deal Value} = \frac{\text{Total Revenue}}{\text{Closed Leads}}$$

Additional Metrics

- Last Lead Activity Date
 - Client Engagement
 - Revenue Contribution
 - Sales Performance
-

Features

- Client analytics
 - Revenue tracking
 - Engagement monitoring
 - Client segmentation
 - Visual reports and charts
-

48. Lead Source Report Module

Definition

The Lead Source Report analyzes where leads originate from and measures the effectiveness of different marketing channels.

It helps businesses identify high-performing lead generation sources.

Common Lead Sources

- Website
 - Social Media
 - Referral
 - Paid Ads
 - Email Campaigns
 - Direct Inquiry
-

Report Metrics

Total Leads Per Source

Total leads generated from each source.

Closed Leads

Successfully converted leads from each source.

Revenue Generated

Revenue earned from each lead source.

Conversion Rate Formula

$$\text{Conversion Rate} = \left(\frac{\text{Closed Leads from Source}}{\text{Total Leads from Source}} \right) \times 100$$

Open Leads

Leads currently in progress.

Lost Leads

Leads that failed to convert.

Features

- Source performance tracking
- Revenue analysis
- Marketing effectiveness measurement
- Conversion analysis
- ROI optimization

Dashboard & Visualization

The report can be displayed using:

- Tables
- Bar Charts
- Pie Charts
- Pipeline Analytics

- Source Comparison Graphs
-

Products & Inventory Module

Overview

The Products & Inventory Module is used to manage products, services, stock levels, pricing, taxation, dimensions, warehouse tracking, and inventory transactions. It provides complete visibility into inventory movement and stock availability across the business.

49.All Items Module

The All Items page provides a centralized list of all products and services along with inventory and pricing information.

Item Listing Fields

Each item record includes:

- SKU
- Image
- Original Image
- Item Name
- HSN/SAC
- Item Type
- Buying Price
- Selling Price
- Landed Cost
- Tax Rate (%)
- Manage Stock
- Is Sales Item
- Category
- Total Stock
- Length
- Breadth
- Height
- Volume (m³)
- Gross Weight
- Net Weight
- Stock in Hand
- Net Committed Stock
- Stock Status
- Reorder Point
- Overstock Point
- Unit
- Average Selling Price
- Average Buying Price
- Total Sold Quantity
- Total Purchase Quantity
- Tags
- Tracking Method

Available Actions

Users can perform the following actions on items:

- Quick View
- Detail View
- Edit
- Duplicate Item
- Delete Item
- Adjust Stock

Quick View

The Quick View provides a summarized overview of an item, including:

Stock Overview

- Total Stock
- Stock in Hand
- Reorder Point
- Overstock Point
- Committed Stock

Product Information

Displays key product details.

Transaction Details

Displays complete transaction history related to the item.

Adjust Stock

The stock adjustment feature allows inventory corrections and updates.

Adjustment Types

- Incoming Stock
- Outgoing Stock

Adjustment Fields

- Quantity
- Rate
- Adjusted Value
- Vendor
- Reason
- Notes
- Custom Fields

Common Adjustment Reasons

- Purchase
- Returned Stock
- Stock Correction
- Damaged Goods
- Physical Verification Adjustment

Reason selection is mandatory while performing stock adjustments.

Detail View

The Detail View displays complete information related to the item, including inventory, pricing, transactions, dimensions, taxation, stock movement history, and warehouse allocation.

Create New Item

Users can create inventory items using the following information.

1. Item/Product Details

Item Type

- Product
- Service

Item Information

- Category
- Item Name
- SKU ID
- Unit
- HSN/SAC

Item Options

- This Item Can Be Sold To Customers
- Manage Stock

Media

- Item Images
- Original Item Images

Additional Information

- Description
- Tags
- Vendor Details
- Dimensions
- Weights
- Custom Fields

2. Accounting Details

Purchase Ledger

Ledger account used to record purchases of the item.

Sales Ledger

Ledger account used to record sales of the item.

Inventory Ledger

Ledger account used to record inventory transactions.

3. Pricing & Taxation

Fields include:

- Currency
- Currency Formatting
- Number Format
- Buying Price
- Selling Price
- Landed Cost
- Tax Rate (%)
- Price Inclusive of Taxes

4. Stock Management

Initial Stock

Opening stock available at the beginning of the accounting period.

Tracking Methods

- None
- Batchwise
- Serial Number
- Batch + Serial Number

5. Reorder & Overstock Configuration

Item Level Stock Settings

- Reorder Point
 - Overstock Point
-

50. Warehouse Module

Overview

The Warehouse Module enables businesses to manage inventory across multiple storage locations. It provides real-time stock tracking, warehouse transfers, inventory adjustments, and warehouse-level reporting.

Key Features

Warehouse Creation

Each warehouse can store:

- Warehouse Name
- Location / Address
- Contact Information
- Notes

Warehouse Management

Users can:

- Create Warehouses
- Edit Warehouses
- Delete Warehouses

- Track Warehouse Stock

Enabling Multiple Warehouses

Navigation:

Business Settings → Inventory Options → Enable Multiple Warehouses

Once enabled, the warehouse feature cannot be disabled.

Stock Management Across Warehouses

Users can:

- Allocate stock to warehouses
- View warehouse-specific stock levels
- Monitor inventory movements
- Set stock thresholds

Stock Adjustments

Stock adjustments can be performed for:

- Damage
- Loss
- Stock Count Corrections
- Inventory Audits

Stock Transfers

Users can transfer inventory between warehouses by specifying:

- Source Warehouse
- Destination Warehouse
- Items
- Quantities
- Transfer Reason

Inventory Tracking

The system maintains:

- Real-Time Stock Levels
- Stock Movement Logs
- Warehouse Transaction History

Reports

Warehouse reports include:

- Stock Levels
- Stock Valuation
- Movement History
- Slow-Moving Inventory
- Excess Stock Analysis

Integration

Warehouse selection is available during:

- Invoice Creation
- Sales Orders
- Purchase Orders
- Stock Adjustments

Stock levels update automatically when transactions are completed.

Benefits

- Accurate Inventory Tracking
 - Reduced Stock Discrepancies
 - Better Warehouse Control
 - Improved Supply Chain Efficiency
 - Enhanced Inventory Reporting
-

51. Product-wise Profitability Report

Overview

The Product-wise Profitability Report helps businesses evaluate the profitability of each product or service by comparing sales revenue against purchase and production costs.

Key Metrics

- Average Selling Price (ASP)
- Average Purchase Price
- Total Revenue
- Total Cost
- Gross Profit
- Profit Margin (%)
- Quantity Sold

Calculations

Gross Profit:

$$\text{Gross Profit} = \text{Total Sales} - \text{Total Purchase Cost}$$

Profit Margin:

$$\text{Profit Margin} = (\text{Gross Profit} \div \text{Total Sales}) \times 100$$

Features

- Product Profitability Analysis
- Margin Calculation
- Cost Tracking
- Product Performance Comparison
- Time-Based Analysis
- Category Filtering

Workflow

1. Collect sales data.
2. Collect purchase and cost data.
3. Match transactions to products.
4. Calculate ASP and average purchase price.
5. Calculate profit and profit margin.
6. Generate product-wise summaries.
7. Review profitability insights.

Benefits

- Identify high-profit products.
 - Optimize pricing strategies.
 - Reduce low-margin inventory.
 - Improve product portfolio decisions.
-

52. Stock Value Report

Overview

The Stock Value Report provides the total monetary value of inventory currently held in stock.

Purpose

- Inventory Valuation
- Financial Reporting
- Stock Planning
- Cost Analysis

Calculation

Stock Value = Quantity in Stock × Cost Per Unit

Total Inventory Value:

Total Stock Value = Sum of All Item Stock Values

Features

- Current Inventory Valuation
- Cost Analysis
- Stock Worth Tracking
- Financial Statement Support
- Inventory Planning

Workflow

1. Update inventory quantities.
2. Record purchases, sales, and adjustments.
3. Determine item cost.
4. Calculate stock value for each item.
5. Aggregate values.
6. Generate report.

Report Fields

- Item Name
 - SKU
 - Quantity in Stock
 - Cost Per Unit
 - Total Stock Value
-

53. Batch Expiry Report

Overview

The Batch Expiry Report helps businesses monitor inventory batches approaching expiry dates.

Features

- Batch-Level Expiry Tracking
- Expiry Alerts
- Expired Stock Identification
- Warehouse-Level Monitoring
- Disposal Planning

Batch Information

- Batch Number
- Item Name
- Manufacturing Date
- Expiry Date
- Quantity
- Warehouse

Calculation

Days Remaining:

Days Remaining = Expiry Date – Current Date

Categories

Expired

Days Remaining $\leq$ 0

Expiring Soon

0 – 15 Days Remaining

Upcoming Expiry

16 – 30 Days Remaining

Workflow

1. Create inventory batches.

2. Record expiry dates.
3. Track stock movement by batch.
4. Calculate remaining days.
5. Categorize batches.
6. Generate report.
7. Take corrective actions.

Benefits

- Reduce inventory waste.
 - Improve stock rotation.
 - Ensure product quality compliance.
-

54. Party Transaction Report

Overview

The Party Transaction Report provides a complete financial history of a selected customer, vendor, or business partner.

Includes

- Invoices
- Payments
- Credits
- Adjustments
- Outstanding Balances

Features

- Party-wise Financial Analysis
- Transaction Timeline
- Outstanding Balance Tracking
- Invoice Reconciliation
- Export Support

Outstanding Balance Calculation

Outstanding Balance = Total Invoices – Total Payments ± Credits/Adjustments

Workflow

1. Select party.
2. Choose reporting period.
3. Retrieve transactions.
4. Aggregate invoices and payments.
5. Calculate outstanding balances.
6. Generate report.

Report Fields

- Date
- Transaction Type

- Description
 - Amount
 - Status
 - Running Balance
-

55. All Transaction Report

Overview

The All Transaction Report provides a consolidated view of all financial transactions recorded in the system.

Included Transactions

- Sales Invoices
- Purchase Bills
- Payments Received
- Payments Made
- Expenses
- Credits
- Refunds
- Adjustments

Features

- Unified Transaction View
- Cash Flow Monitoring
- Financial Reconciliation
- Export Support
- Real-Time Reporting

Net Position Calculation

Net Balance = Total Inflows – Total Outflows

Workflow

1. Select reporting period.
2. Apply filters.
3. Retrieve transactions.
4. Aggregate transaction data.
5. Calculate balances.
6. Review and export report.

Report Fields

- Date
- Transaction Type
- Description
- Party
- Amount
- Status
- Balance

56. Stock Status Report

Overview

The Stock Status Report provides a real-time overview of inventory health by categorizing stock levels according to predefined thresholds.

Key Features

- Real-Time Inventory Monitoring
- Multi-Warehouse Support
- Stock Health Analysis
- Reorder Alerts
- Overstock Identification

Threshold Configuration

Each item includes:

- Reorder Point
- Overstock Point

Stock Status Categories

Critical

Current Stock < Reorder Point

Immediate replenishment required.

Low Stock

Current Stock is approaching the reorder level.

Reordering should be planned.

Well Stock

Stock levels are healthy and within target range.

Overstock

Current Stock ≥ Overstock Point

Excess inventory exists.

Well Stock Threshold Formula

Well Stock Threshold = Reorder Point + 0.3 × (Overstock Point – Reorder Point)

Workflow

1. Define stock thresholds.
2. Update inventory movements.
3. Calculate current stock levels.

4. Compare stock against thresholds.
5. Categorize stock status.
6. Generate report.
7. Take inventory actions.

Report Fields

- Item Name
- Warehouse
- Current Stock
- Reorder Point
- Overstock Point
- Stock Status
- Recommended Action

Benefits

- Prevent stockouts.
- Avoid excess inventory.
- Improve inventory planning.
- Optimize carrying costs.
- Support purchasing decisions.

Reports

57. Custom Reports Module

Overview

The Custom Reports Module allows businesses to create personalized reports based on their specific reporting requirements. Unlike predefined reports, custom reports provide flexibility to select data sources, fields, filters, calculations, and visualizations to generate meaningful business insights.

Purpose

- Create personalized business reports
- Analyze specific KPIs and metrics
- Monitor business performance
- Generate tailored insights
- Improve decision-making through customized analytics

Key Features

Flexible Report Builder

Users can create reports by selecting:

- Data Sources
- Data Fields
- Filters
- Metrics
- Calculations
- Visualizations

Custom Data Selection

Reports can be generated using data from:

- Invoices
- Payments
- Expenses
- Inventory
- Customers
- Vendors
- Products
- Financial Records

Advanced Filtering

Users can apply filters based on:

- Date Range
- Customer
- Vendor
- Product
- Category
- Transaction Status
- Warehouse
- Payment Status

Visualization Options

Data can be presented using:

- Tables
- Bar Charts
- Pie Charts
- Line Graphs
- Dashboards
- Summary Cards

Export & Sharing

Reports can be exported in:

- PDF
- Excel

Reports can also be shared with stakeholders.

How Custom Reports Work

1. Data Selection

Users choose the required data fields and sources.

Examples:

- Total Sales
- Total Expenses

- Gross Profit
- Product Revenue
- Customer Count

2. Filtering & Segmentation

Data can be filtered based on business requirements.

Examples:

- Last Month Sales
- Revenue by Customer
- Product Category Performance
- Paid Invoices Only

3. Aggregation & Summarization

The system performs calculations such as:

- Sum
- Average
- Count
- Percentage
- Ratio

4. Custom Formula Calculations

Users can create custom calculations such as:

Profit Margin

Profit Margin = $(\text{Profit} \div \text{Revenue}) \times 100$

Growth Rate

Growth Rate = $((\text{Current Period} - \text{Previous Period}) \div \text{Previous Period}) \times 100$

Revenue Ratios

Expense Ratios

Performance Indicators

5. Visualization & Reporting

The processed data is displayed using selected visualization methods.

Complete Workflow

Step 1 — Open Custom Reports

Navigate to:

Reports → Create Custom Report

Step 2 — Select Data Sources

Choose one or more modules:

- Invoices
- Payments
- Expenses
- Inventory
- Customers
- Vendors

Step 3 — Configure Data Fields

Select fields for analysis.

Examples:

- Revenue
- Quantity Sold
- Profit Margin
- Expenses
- Customer Count

Step 4 — Apply Filters

Configure:

- Date Range
- Customer
- Vendor
- Product Category
- Transaction Status

Step 5 — Select Visualization

Choose:

- Table
- Chart
- Dashboard

Step 6 — Generate Report

Preview and review report results.

Step 7 — Save Report

Save the report template for future use.

Step 8 — Export & Share

Download or share the report.

Benefits

- Personalized Reporting
- Better KPI Tracking
- Faster Business Analysis
- Improved Decision Making
- Automated Reporting
- Flexible Data Exploration

Summary

The Custom Reports Module enables businesses to create highly customized reports by selecting relevant data sources, applying filters, defining calculations, and choosing visualization formats. It helps organizations generate actionable insights tailored to their operational and strategic requirements.

58. Reports Module

Overview

The Reports Module serves as a centralized reporting hub that consolidates financial, sales, inventory, taxation, operational, and business performance reports into a single location. It helps businesses monitor performance, analyze trends, maintain compliance, and make data-driven decisions.

Purpose

- Monitor business performance
- Analyze financial health
- Track inventory activities
- Evaluate sales performance
- Manage compliance reporting
- Support strategic planning

Key Features

Centralized Dashboard

Access all reports from a single interface.

Real-Time Reporting

Reports automatically reflect the latest business transactions and updates.

Customizable Filters

Filter reports by:

- Date Range
- Customer
- Vendor
- Product
- Category
- Transaction Type
- Status

Export & Sharing

Reports can be exported as:

- PDF
- Excel

Data Visualization

Reports support:

- Charts
 - Graphs
 - Dashboards
 - Tables
 - Summary Widgets
-

Types of Reports Available

1. Financial Reports

Profit & Loss Statement

Displays:

- Revenue
- Expenses
- Gross Profit
- Net Profit

Used to evaluate overall business profitability.

Balance Sheet

Displays:

- Assets
- Liabilities
- Equity

Provides a snapshot of the company's financial position.

Cash Flow Report

Displays:

- Cash Inflows
- Cash Outflows
- Net Cash Position

Used to monitor liquidity and cash management.

2. Sales & Revenue Reports

Invoice Reports

Provides details about:

- Issued Invoices
- Paid Invoices
- Unpaid Invoices
- Overdue Invoices

Product-wise Sales Report

Shows:

- Product Revenue
- Quantity Sold
- Sales Trends

Client Performance Reports

Displays:

- Revenue by Customer
 - Transaction History
 - Customer Contribution
-

3. Expense Reports

Provides analysis of:

- Vendor Expenses
- Expense Categories
- Operational Costs
- Expense Trends

Helps identify cost-saving opportunities.

4. Inventory Reports

Includes:

- Stock Status Report
- Stock Value Report
- Batch Expiry Report
- Product-wise Profitability Report
- Warehouse Reports

Provides complete inventory visibility.

5. Tax & Compliance Reports

Includes:

- GST Reports
- TDS Reports
- Tax Summary Reports
- Compliance Reports

Helps businesses prepare statutory filings and audits.

6. Custom Reports

User-defined reports built using:

- Custom Data Sources
- Filters
- Calculations
- Visualizations

Provides tailored business insights.

How Businesses Use Reports

Financial Monitoring

Businesses use reports to:

- Measure Profitability
- Analyze Revenue
- Track Expenses
- Monitor Cash Flow

Performance Analysis

Reports help identify:

- Best-Selling Products
- High-Value Customers
- Top Performing Sales Channels

Expense Control

Businesses can:

- Monitor Spending
- Analyze Expense Trends
- Reduce Operational Costs

Inventory Optimization

Reports assist in:

- Reorder Planning
- Overstock Management
- Expiry Tracking
- Warehouse Monitoring

Forecasting & Planning

Historical report data helps:

- Predict Future Sales
- Forecast Expenses
- Estimate Cash Requirements
- Support Business Growth Planning

Compliance Management

Generate reports required for:

- Tax Filing
- Audits
- Financial Reviews
- Regulatory Compliance

Data-Driven Decision Making

Business owners and managers can use report insights to:

- Improve Profitability
 - Optimize Inventory
 - Increase Sales Performance
 - Reduce Costs
 - Plan Growth Strategies
-

Reports Module Workflow

Step 1 — Access Reports Dashboard

Navigate to:

Reports → Dashboard

Step 2 — Select Report Type

Choose:

- Financial Report
- Sales Report
- Inventory Report
- Tax Report
- Custom Report

Step 3 — Apply Filters

Configure reporting criteria.

Step 4 — Generate Report

System retrieves and processes data.

Step 5 — Analyze Results

Review tables, charts, and summaries.

Step 6 — Export or Share

Download reports or share them with stakeholders.

Benefits

- Centralized Reporting
- Real-Time Business Insights
- Better Financial Visibility
- Improved Inventory Control
- Faster Decision Making
- Compliance Readiness
- Enhanced Business Performance Tracking

Summary

The Reports Module provides a centralized platform for generating and analyzing business reports across finance, sales, inventory, taxation, and operations. Through real-time data, advanced filtering, customizable reporting, and visual dashboards, it enables businesses to monitor performance, identify opportunities, ensure compliance, and make informed strategic decisions.

GST Reports Module

59.GSTR-1 Sales Report Module

Overview

The GSTR-1 Sales Report is a GST compliance report that summarizes all outward supplies (sales transactions) made by a registered taxpayer during a selected reporting period. It helps businesses prepare and file GSTR-1 returns accurately by consolidating invoice-level sales data and GST calculations.

Purpose

- Facilitate GST return filing.
- Maintain accurate records of outward supplies.
- Ensure proper GST reporting and compliance.
- Support Input Tax Credit (ITC) reconciliation.
- Validate sales data before submission.

Key Features

- Automatic sales invoice collection.
- Invoice-wise GST calculations.
- Intra-state and inter-state transaction classification.
- Support for taxable, exempt, zero-rated, reverse charge, and deemed export transactions.
- Detailed and summary report views.
- GST portal compatible export options.
- Data validation and error checking.

Calculation Process

1. Collect all sales invoices within the selected period.
2. Categorize supplies based on transaction type.
3. Calculate taxable value and GST components.
4. Compute CGST, SGST/UTGST, and IGST amounts.
5. Aggregate totals by GST rate and supply category.
6. Generate invoice-wise and summary reports.

Workflow

1. Create and verify sales invoices.
 2. Review invoice information and GST details.
 3. Generate the GSTR-1 report for the selected period.
 4. Validate and reconcile transaction data.
 5. Export the report.
 6. Upload data to the GST portal.
 7. File the return and maintain records.
-

60.GSTR-2B Purchase Report Module

Overview

The GSTR-2B Purchase Report is a static GST statement that consolidates eligible inward supplies and Input Tax Credit (ITC) available for a taxpayer during a reporting period.

Purpose

- Verify eligible ITC.
- Reconcile supplier filings.
- Improve GST compliance.
- Support accurate ITC claims.
- Identify missing or incorrect purchase entries.

Key Features

- Automatic data fetching from supplier filings.
- Purchase reconciliation support.
- ITC eligibility verification.
- Invoice-level and summary views.
- Amendment tracking.
- GST filing support.
- Error detection and validation.

Calculation Process

1. Collect inward supply data from supplier GSTR-1 filings.
2. Retrieve import and reverse charge information.
3. Categorize transactions.
4. Identify eligible ITC.
5. Exclude blocked or ineligible credits.
6. Calculate total CGST, SGST/UTGST, and IGST credits.
7. Generate summary and detailed reports.

Workflow

1. Collect supplier and import data.
2. Review GSTR-2B information.
3. Reconcile purchases with internal records.
4. Verify eligible ITC.
5. Resolve discrepancies.
6. Claim ITC in GST returns.

7. Maintain audit records and reconciliation history.
-

61.GSTR-3B Summary Report Module

Overview

The GSTR-3B Summary Report consolidates outward supplies, inward supplies, input tax credits, and GST liabilities for a reporting period. It is used for GST payment and return filing.

Purpose

- Calculate GST liabilities.
- Claim eligible ITC.
- Reconcile sales and purchase transactions.
- Support GST return filing.
- Ensure regulatory compliance.

Key Features

- Automatic integration of sales and purchase data.
- GST liability computation.
- ITC adjustment and reversal support.
- Reconciliation tools.
- Error validation.
- Filing and export support.
- Compliance tracking.

Calculation Process

1. Calculate total outward taxable supplies.
2. Determine GST liability on sales.
3. Retrieve eligible ITC from purchase records and GSTR-2B.
4. Adjust reversals and blocked credits.
5. Calculate net GST payable or refundable.
6. Generate the summary report.

Workflow

1. Prepare sales and purchase data.
 2. Reconcile GST records.
 3. Generate the GSTR-3B report.
 4. Review liabilities and ITC.
 5. Make necessary corrections.
 6. Pay GST liabilities.
 7. File returns and maintain records.
-

Workflows & Automations

62.Vendor Leads Workflow Module

Overview

The Vendor Leads Workflow automates vendor onboarding by managing approvals, reviews, notifications, and registration activities.

Key Features

- Lead stage management.
- Approval routing.
- Automated notifications.
- Task assignment.
- Vendor onboarding tracking.
- Audit trail maintenance.

Workflow Stages

- New Lead
- Initial Contact
- Negotiation
- Approval
- Registered Vendor

Workflow Process

1. Create vendor lead.
 2. Assign approvers.
 3. Review and approve vendor information.
 4. Move through workflow stages.
 5. Notify responsible team members.
 6. Complete onboarding and registration.
-

63.Expenses Workflow Module

Overview

The Expenses Workflow automates expense approval and reimbursement processes across the organization.

Workflow Stages

- New Expense
- Under Review
- Approved
- Rejected
- Reimbursed

Key Features

- Expense approval automation.
- Reimbursement tracking.
- Notifications and reminders.
- Audit trail maintenance.
- Expense status monitoring.

Workflow Process

1. Employee submits expense request.
 2. Expense enters approval workflow.
 3. Approvers review request.
 4. Approve or reject expense.
 5. Process reimbursement.
 6. Update expense status.
-

64.Invoice Workflow Module

Overview

The Invoice Workflow automates invoice review, approval, and delivery processes.

Workflow Stages

- Draft
- Pending Approval
- In Review
- Approved
- Rejected
- Sent to Client

Key Features

- Invoice approval management.
- Automated notifications.
- Approval history tracking.
- Client delivery automation.
- Audit compliance support.

Workflow Process

1. Create invoice.
 2. Submit for approval.
 3. Review by approvers.
 4. Approve or reject invoice.
 5. Send approved invoice to customer.
 6. Track invoice status.
-

65.Quotation Workflow Module

Overview

The Quotation Workflow streamlines quotation review, approval, and client communication processes.

Workflow Stages

- Draft
- Pending Approval

- In Review
- Approved
- Rejected
- Sent to Client

Key Features

- Quotation approval automation.
- Client communication management.
- Workflow tracking.
- Approval audit trail.
- Sales cycle acceleration.

Workflow Process

1. Create quotation.
 2. Submit for approval.
 3. Review quotation details.
 4. Approve or reject quotation.
 5. Share quotation with customer.
 6. Track quotation progress.
-

66.Purchase Order Workflow Module

Overview

The Purchase Order Workflow manages purchase request approvals and procurement activities.

Workflow Stages

- Draft
- Pending Approval
- In Review
- Approved
- Rejected
- Received

Key Features

- Procurement approval automation.
- Vendor notification support.
- Purchase tracking.
- Goods receipt management.
- Audit compliance.

Workflow Process

1. Create purchase order.
2. Submit for approval.
3. Review purchase details.
4. Approve or reject request.
5. Send PO to vendor.
6. Record goods receipt.

67.Proforma Invoice Workflow Module

Overview

The Proforma Invoice Workflow manages approval and conversion of proforma invoices into final invoices.

Workflow Stages

- Draft
- Pending Approval
- In Review
- Approved
- Rejected
- Converted to Final Invoice

Key Features

- Approval management.
- Invoice conversion tracking.
- Automated notifications.
- Workflow monitoring.
- Audit trail support.

Workflow Process

1. Create proforma invoice.
 2. Submit for review.
 3. Approve or reject document.
 4. Convert approved document into final invoice.
 5. Notify relevant stakeholders.
-

68.Workflow Forms Module

Overview

Workflow Forms define approval stages, approvers, conditions, and actions for business processes.

Key Features

- Custom approval forms.
- Approval routing.
- Automated notifications.
- Status tracking.
- Audit trail management.
- Role-based approval control.

Workflow Process

1. Create workflow.
2. Configure approval stages.

3. Assign approvers.
 4. Define conditions and actions.
 5. Link workflow to documents.
 6. Track approvals and status changes.
-

Banking & Payments Module

69.Payments Account Module

Overview

The Payments Account Module helps businesses manage financial transactions across bank accounts, employee accounts, cash accounts, wallets, cards, and other payment sources.

Key Features

- Multiple payment account creation.
- Transaction recording.
- Account-specific ledger management.
- Reconciliation support.
- Cash flow tracking.
- Reporting and analytics.

Account Types

- Bank Account
- Employee Account
- Cash Account
- UPI Account
- Credit Card
- Debit Card
- Digital Wallet

Workflow

1. Create payment account.
 2. Record transactions.
 3. View account ledger.
 4. Reconcile transactions.
 5. Generate reports.
 6. Manage account balances and history.
-

70.Bank Accounts Module

Overview

The Bank Accounts Module manages all company bank accounts and banking transactions.

Key Features

- Multiple bank account management.
 - Deposit and withdrawal tracking.
 - Fund transfer management.
 - Bank ledger maintenance.
 - Reconciliation support.
 - Bank reporting.
-

71.Employee Accounts Module

Overview

The Employee Accounts Module tracks employee-related financial transactions separately from business accounts.

Key Features

- Employee account creation.
 - Salary payment tracking.
 - Reimbursement management.
 - Advance payment tracking.
 - Employee ledger history.
 - Payroll reporting.
-

72.Bank Reconciliation Module

Overview

The Bank Reconciliation Module ensures internal financial records match bank statements.

Key Features

- Bank statement import.
- Automatic transaction matching.
- Manual reconciliation support.
- Unmatched transaction review.
- Reconciliation reporting.
- Financial accuracy validation.

Workflow

1. Upload bank statement.
 2. Match transactions.
 3. Review unmatched entries.
 4. Confirm reconciliation.
 5. Generate reconciliation report.
-

Payroll & HRMS Module

73. Payroll and HRMS Module

Overview

The Payroll and HRMS Module automates employee management, payroll processing, attendance tracking, leave management, reimbursements, and statutory compliance activities.

Core Functionalities

Payroll Management

- Automated salary calculation.
- Payslip generation.
- Bonus and deduction management.
- PF, ESI, TDS, and statutory deductions.
- Reimbursement processing.

Employee Records Management

- Employee profile management.
- Employment history tracking.
- Document management.
- Salary structure configuration.

Attendance & Leave Management

- Attendance tracking.
- Leave request management.
- Leave approvals.
- Attendance-based payroll calculations.

Compliance Management

- Statutory deduction calculations.
- Compliance reporting.
- Tax and labor law support.

Expense & Reimbursement Management

- Employee expense tracking.
- Reimbursement approval workflows.
- Advance management.

Reports & Analytics

- Payroll reports.
- Employee cost analysis.
- Attendance reports.
- Leave utilization reports.
- Compliance reports.

Payroll Workflow

1. Employee onboarding.
2. Attendance and leave tracking.
3. Salary calculation.
4. Payroll processing.

5. Salary disbursement.
6. Compliance filing.
7. Reimbursement processing.
8. Reporting and analysis.
9. Ongoing employee management.

Benefits

- Automated payroll processing.
- Improved compliance management.
- Reduced manual effort.
- Better employee record management.
- Accurate salary calculations.
- Comprehensive HR reporting.

Manage Team

74.Manage Users Module

Overview

The Manage Users Module allows administrators to create, manage, and control user access within the system. It helps businesses assign roles, manage permissions, and maintain secure access to various modules and business data.

Purpose

- Create and manage user accounts.
- Assign roles and permissions.
- Control access to business modules.
- Maintain security and accountability.
- Track user activities and changes.

Key Features

- User creation and invitation.
- Role-based access control.
- Custom permission management.
- User activation and deactivation.
- Access monitoring and audit logs.
- Approval workflow support.

Create New User

Navigate to:

Settings → Manage Users → Add User

Enter the following details:

- Full Name
- Email Address
- Role
- Permissions
- Access Level

Send an invitation to activate the user account.

Workflow

Step 1 – Create User

The administrator creates a new user and enters the required information.

Step 2 – Assign Roles & Permissions

Select the appropriate role and configure module access permissions.

Step 3 – Send Invitation

The system sends an invitation email to the user.

Step 4 – User Activation

The user accepts the invitation, sets a password, and activates the account.

Step 5 – Manage Access

Administrators can edit permissions, update roles, deactivate users, or remove users when required.

Step 6 – Audit & Monitoring

The system maintains records of user creation, permission changes, and account activities for security and compliance purposes.

Benefits

- Secure user management.
- Role-based access control.
- Improved team collaboration.
- Enhanced security and compliance.
- Complete audit trail of user activities.

Summary

The Manage Users Module helps businesses securely manage user accounts, roles, and permissions. It simplifies user onboarding, controls access to business data, and maintains a complete audit trail for administration, security, and compliance.

75.Manage Team Roles Module

Overview

The Manage Team Roles Module allows businesses to create and manage role-based access control within the system. It enables administrators to define user responsibilities and assign permissions based on job roles.

Purpose

- Create and manage team roles.
- Control user access to modules and data.
- Improve security and accountability.
- Clearly define user responsibilities.
- Support organizational growth and compliance.

Key Features

- Custom role creation.
- Role-based permission management.
- User role assignment.
- Module-level access control.
- Role editing and updates.
- Secure access management.

Create New Role

Navigate to:

Settings → Manage Team Roles → Add Role

Enter the following details:

- Role Name
- Description (Optional)
- Module Permissions
- Access Level Settings

Select permissions for modules such as:

- Invoices
- Quotations
- Expenses
- Reports
- Inventory
- User Management
- Business Settings

Workflow

Step 1 – Create Role

Create a new role by providing a role name and description.

Step 2 – Configure Permissions

Select the modules and actions that the role can access, including view, create, edit, approve, and delete permissions.

Step 3 – Save Role

Save the role configuration for future assignments.

Step 4 – Assign Role to Users

Navigate to the Manage Users module and assign the role to team members.

Step 5 – Manage & Update Roles

Modify permissions or create additional roles as business requirements evolve.

Step 6 – Access Control & Monitoring

The system enforces role-based permissions and maintains records of role assignments and permission updates.

Benefits

- Improved security and access control.
- Clear separation of responsibilities.
- Reduced risk of unauthorized actions.
- Better team management.
- Scalable permission structure.

Summary

The Manage Team Roles Module helps businesses create customized roles and assign permissions based on employee responsibilities. It provides secure access control, improves operational efficiency, and ensures that users can access only the features and data relevant to their roles.

Business Settings

76.Business Settings Module

Overview

The Business Settings Module allows businesses to configure company-wide preferences, accounting controls, security settings, inventory behavior, email integrations, CRM configurations, approval workflows, and other operational settings. It serves as the central administration area for customizing how the system operates.

1. General Settings

Purpose

Configure basic business preferences and subscription-related settings.

Features

Subscription Information

Premium subscribers can view:

- Plan Type
- Subscription Status
- Last Payment Date
- Billing Cycle
- Expiry Date
- Renewal Options

PDF & Report Configuration

- Select PDF script/template.
- Choose document fonts.
- Configure report formatting.

Time & Currency Settings

- Business Time Zone
- Business Currency
- Currency Locale
- Date & Time Format

Security Settings

- Public Profile Toggle
- Change Password
- Remove Current Business
- Account Security Controls

Benefits

- Centralized business configuration.
 - Consistent document formatting.
 - Improved security management.
 - Accurate regional settings.
-

2. Accounting Settings

Purpose

Configure taxation, billing, compliance, and accounting controls.

Modules Included

Taxation & Billing

- Tax Configuration (GST, VAT, etc.)
- Tax Rules and Jurisdictions
- Invoice Numbering
- Payment Terms
- Discounts and Late Fees

- Recurring Invoices

Customized RFI/RFQ

- Custom RFI/RFQ Templates
- Custom Headers and Fields
- Vendor Link Management

GST Configuration

- GST Registration Details
- GSTIN Management
- Automatic GST Calculation
- GST Reports and Filing Support

KYC Details

- Business Verification
- Ownership Information
- Bank Details
- Document Uploads
- Compliance Tracking

Document Customization

- Custom Labels
- Custom Fields
- Experimental Features
- QR Code Configuration
- Document Acceptance Controls

Benefits

- Improved compliance.
 - Automated tax calculations.
 - Flexible billing processes.
 - Better document management.
-

3. Approval Workflow Settings

Purpose

Create custom multi-level approval workflows for business processes.

Features

- Multiple Workflow Creation
- Custom Approval Stages
- Role-Based Approvers
- Conditional Approval Rules
- Automated Notifications
- Approval Reminders
- Document Restrictions by Stage
- Complete Audit Trail

Workflow

1. Create Workflow
2. Define Stages
3. Assign Approvers
4. Configure Conditions
5. Enable Notifications
6. Monitor Approvals
7. Review Audit Logs

Benefits

- Strong internal controls.
 - Transparent approval process.
 - Reduced manual follow-up.
 - Improved compliance.
-

4. Inventory Settings

Purpose

Manage inventory behavior, stock control, warehouses, and stock automation.

Features

Inventory Management

- Enable Inventory Tracking
- Auto-Update Stock
- Manual or Automatic Stock Control

Inventory Configuration

- FIFO, LIFO, or Average Cost Valuation
- Multi-Warehouse Support
- Stock Management Rules

Inventory Items

- Product Management
- SKU Tracking
- Categories and Units
- Barcode and QR Support

Stock Operations

- Stock Adjustments
- Bulk Updates
- Stock Transfers
- Stock Corrections

Reports & Alerts

- Stock Summary
- Stock Movement Reports

- Low Stock Alerts
- Stock Valuation Reports

Sales & Purchase Integration

- Automatic Inventory Updates
- Purchase Integration
- Invoice Integration

Benefits

- Accurate stock tracking.
 - Reduced inventory errors.
 - Improved warehouse management.
 - Better stock visibility.
-

5. Advanced Accounting Settings

Purpose

Provide advanced accounting configuration and financial controls.

Features

Account Groups & Categories

- Assets
- Liabilities
- Income
- Expenses
- Custom Categories

Ledger Accounts

- Cash Ledger
- Bank Ledger
- Accounts Receivable
- Accounts Payable

Voucher Management

- Payment Vouchers
- Receipt Vouchers
- Journal Vouchers
- Voucher Books

Journal Entries

- Manual Journal Entries
- Adjustments
- Accruals
- Depreciation Entries

Bank & Cash Management

- Bank Accounts
- Cash Accounts
- Reconciliation

Automation Rules

- Recurring Entries
- Automated Postings
- Accounting Rules

Financial Reports

- Balance Sheet
- Profit & Loss
- Trial Balance
- Cash Flow Statement
- General Ledger

Multi-Currency & Tax Integration

- Multiple Currency Support
- Tax Rule Integration

Benefits

- Strong financial control.
 - Better accounting automation.
 - Accurate reporting.
 - Improved compliance.
-

6. Email Settings

Purpose

Configure email sending, templates, and notification automation.

Features

Email Connections

- Gmail Integration
- Outlook Integration
- Custom SMTP Configuration

Sender Configuration

- Sender Email
- Sender Name
- Default Document Email

Email Templates

- Custom Subjects
- Dynamic Templates
- Personalized Content

Email Automation

- Invoice Reminders
- Payment Notifications
- Approval Notifications

Email Verification

- Test Email Functionality
- Deliverability Checks

Benefits

- Professional communication.
 - Automated reminders.
 - Better email branding.
 - Reliable email delivery.
-

7. Lead Management (CRM) Settings

Purpose

Configure lead capture, sales pipelines, and customer relationship workflows.

Features

Lead Capture & Sources

- Website Forms
- Landing Pages
- Email Integrations
- Lead Source Tracking

Lead Labels & Tags

- Hot Leads
- Warm Leads
- Cold Leads
- Follow-Up Tags

Lead Pipelines

- Custom Sales Stages
- Multiple Pipelines
- Stage Automation

Lead Assignment

- Auto Assignment
- Manual Assignment
- Ownership Management

Notifications & Reminders

- New Lead Alerts

- Follow-Up Reminders
- Status Change Notifications

Campaign Tracking

- Marketing Source Tracking
- Campaign Performance Monitoring

Lead Conversion

- Lead to Customer Conversion
- Automated Follow-Ups

Lead Analytics

- Conversion Reports
- Source Analysis
- Team Performance Reports

Benefits

- Better lead organization.
 - Improved sales tracking.
 - Higher conversion rates.
 - Enhanced CRM management.
-

8. Custom Fields & Tags Settings

Purpose

Allow businesses to capture additional information and organize records efficiently.

Custom Fields Features

- Text Fields
- Number Fields
- Date Fields
- Dropdown Fields
- Email Fields
- Phone Fields
- URL Fields

Usage

- Invoices
- Quotations
- Expenses
- Leads
- Customers
- Vendors

Tags Features

- Create Custom Tags

- Multiple Tag Assignment
- Search & Filter Support
- Record Categorization

Examples

Custom Fields

- Project Name
- Delivery Date
- Purchase Order Number
- Client Reference

Tags

- High Priority
- Repeat Client
- Urgent
- Paid
- Pending

Benefits

- Personalized data management.
 - Better organization.
 - Faster searching and filtering.
 - Improved reporting capabilities.
-

Summary

The Business Settings Module serves as the central administration hub for configuring business operations, accounting controls, taxation, inventory management, CRM workflows, email communication, approval processes, custom fields, and security settings. It provides businesses with complete flexibility to customize system behavior, improve compliance, automate operations, and enhance overall business efficiency.
